

Dave Potter has worked in gas turbine component repair for 34 years, specializing in materials, joining, and thermal spray technologies. He has authored numerous reports on materials development and properties and has several related patents. His current position is Project Manager for Pratt & Whitney Global Services Engineering. His primary interest is development and deployment of new repair methods for engine components to reduce the cost of overhaul and keep the customer's fleet flying. Dave graduated from Lehigh University with a Bachelor of Science in Metallurgy and Materials Engineering and from Rensselaer Polytechnic Institute with a Master of Science in Metallurgy.
