

### **Diego Castillo**

A young and experienced natural gas professional. With more than 10 years of experience in the sector, Diego has worked in many areas of this fascinating business, culminating in a wide range of knowledge in this industry. Diego has started his career as an Asset Integrity engineer at Comgas, the largest and fastest growing Natural Gas Distributor in Brazil. During his prolonged experience in Asset Integrity, he has engaged in activities such as reliability-centered maintenance, structural integrity and risk based integrity management plans. After this period, he moved to the Operations area where he worked in almost all departments from maintenance and emergency response to control room management and gas quality analysis. Today Diego works as Grid Operation and Metering manager and he is helping Comgás in an ambitious plan of digital transformation, including asset automation and remote monitoring to improve the system integrity.
