Conference

July 14 to 18th, 2019

Snowbird Resort,  
Salt Lake City, UT

# ROBOTICS AND DRONE SEMINAR

IN CONJUNCTION WITH ASME'S POWER 2019 CONFERENCE

## Call for Participation!

RSVP by **June 15th, 2019**

Fossil, Nuclear, and other electric generation stations can benefit by leveraging robotics and drone technology. But, knowing how and when to expand your current processes can be challenging. The inaugural Robotics and Drone Seminar is designed to help engineers, NDT managers, plant managers, asset managers, inspectors, purchasing managers, outage planners, and turnaround planners achieve the following:

- » Learn how to deploy and maintain a fleet of drones that provide multiple services.
- » See the latest in drone technology and how it applies to the field of Non-Destructive Testing.
- » Find out where robots are being used in power plants for personnel protection.
- » Watch demonstrations of robotic manipulation and drone deployment.

*For more information about how you or your company can get to present your robotic and drone design and deployment solutions, please contact: Camille Cruz ([CruzAlfonzoC@asme.org](mailto:CruzAlfonzoC@asme.org)).*
